Comprehensive Esthetic and Restorative Residency

Creating Successful Practices For Over 25 years

This comprehensive program covers all areas of contemporary esthetic and restorative dentistry. It starts with practice structure, communication, photographic skills, and provides an in-depth education in the full range of esthetic therapies and treatment design. It will expose residents to the latest equipment, materials, techniques, and provide an in-depth hands-on experience and training in all the latest treatment options and modalities.

Our ultimate goal of this residency is to ensure that each resident leaves the program with an elevated level of confidence, knowledge, and esthetic restorative practice skills. These skills can be used immediately to provide patients with state of the art contemporary esthetic and restorative dentistry, and provide residents with an increased practice enjoyment and an enhanced bottom line.

This program was designed for general dentist and provides a foundation of knowledge and experience in all facets of contemporary restorative dentistry. It has enhanced practice successes for over 25 years.
